After extensive testing, we were able to prove that wool's thermal properties outperformed polystyrene, providing temperature stability and safeguarding our precious wine cargo on its journey across the world to your door.

Our innovative environmentally sustainable packaging solution creatively blends sheep's wool with composite cardboard materials. This solution simultaneously achieves both optimum strength, durability, and thermal resistance properties within a fully eco-friendly & biodegradable construction.

As a fully natural product, you can expect to see a bit of organic matter leftover from the scouring & sterilisation process, as well as some variation in the wool's appearance.

We are 100% committed and proud to support the New Zealand wine industry in our common quest towards sustainability. Our goal is to deliver your fine New Zealand wine around the globe to your home, while protecting the environment and reducing the amount of polystyrene going into the world's landfills.
